

CARDIO SOLUTION™ BY SOPHiA GENETICS

The Cardio Solution (CAS) by SOPHiA GENETICS is a molecular diagnostic application that bundles a capture-based target enrichment kit with the analytical power of SOPHiA™ AI and full access to the SOPHiA DDM® platform.

Smart Kit Design

SaaS Analytical Platform

The CAS panel covers the coding regions and splicing junctions (\pm 25bp) of 31 most clinically relevant genes (target region of 131 kb), associated with arrhythmias (e.g. Long/Short QT syndrome or Brugada syndrome) and cardiomyopathies. It guarantees high on-target rate and coverage uniformity even in GC-rich regions, including the first exon.

Gene panel
 CACNA1C, CACNA2D1, CACNB2, CASQ2, CTNNA3, DSC2, DSG2, DSP, HCN4, KCNE1, KCNE2, KCNH2, KCNJ2, KCNQ1, LMNA, MYBPC3, MYH6, MYH7, MYL2, NKX2.5, PKP2, PLN, PRKAG2, RYR2, SCN10A, SCN5A, TMEM43, TNNI3, TNNT2, TRDN, TTR

Recommendations
Starting material: 200 ng
Sample source: Blood
Samples per run: Depending on sequencing platform⁽¹⁾

Sequencer	Flow Cell / Ion Chip Kit	Recommended samples per run (for 250x median coverage depth)
Illumina MiSeq®	v3 (2x300bp)	32
Ion S5™	Ion 540	48

Wet lab
Day 1: Library Preparation
Day 2: Capture and Sequencing
 Total hands-on time: 8 hours

SOPHiA analyzes complex genomic NGS data by detecting, annotating and pre-classifying genomic variants to help clinicians better diagnose their patients. It enables accurate and comprehensive detection of SNVs, Indels and CNVs in all genes of the panel.

SOPHiA reaches excellent clinical-grade analytical performance:

	Observed	Lower 95% CI
Sensitivity	100%	97.36%
Specificity	100%	99.99%
Accuracy	100%	99.99%
Precision	100%	96.94%
Repeatability	100%	99.98%
Reproducibility	100%	99.97%
Coverage uniformity	99.51%	
Average percentage of target region with depth > 200x	99.78%	

Analysis time from FASTQ files: 4 hours⁽²⁾

The results are presented in SOPHiA DDM, the platform of choice for clinicians performing routine diagnostic testing. Its intuitive user interface and advanced features facilitate the visualization and interpretation of genomic variants. Patient's data is kept safe by applying the highest industrial standards of encryption.

Main features
 Dedicated features in SOPHiA DDM reduce the complexity of determining the clinical significance of genomic variants

- **Dual variant pre-classification:** Improve assessment of variants pathogenicity with the pre-classification of both ACMG guidelines and SOPHiA's prediction.
- **Virtual Panels:** Restrict the interpretation to sub-panels of genes (e.g. focus on arrhythmias or cardiomyopathies)
- **Variant Filter Builder:** Define and edit custom filters for efficient analysis, search for phenotype-related genes (HPO browser integrated)

Access to SOPHiA's Community
 In SOPHiA DDM, experts from hundreds of healthcare institutions interpret the results and flag the pathogenicity level of variants according to their knowledge and experience. This highly valuable information feeds the variant knowledge base and is anonymously and safely shared among the members of the community.
