SOPHiA GENETICS and Paragon Genomics Join Forces Against the COVID-19 Coronavirus Pandemic

Entering the fight against COVID-19

Reinforcing our existing partnership with Paragon Genomics, SOPHiA GENETICS is entering the fight against the COVID-19 coronavirus. Together, we will deliver a comprehensive diagnostic solution to help fight the pandemic.

"This will enable us to accelerate accurate diagnosis capabilities, support global epidemiology efforts as the disease progresses and work with our biopharma partners to accelerate the development of candidate vaccines and anti-viral therapeutic approaches," said SOPHiA GENETICS' Chief Medical Officer Philippe Menu.

The power of whole exome sequencing to fight COVID-19

Spotlight on the SOPHiA Whole Exome Solution

Applied to the patients diagnosed with COVID-19, the SOPHiA Whole Exome Solution can help research institutions identify human genetic variations involved in response to infection.

Leveraging the analytical power of our AI-based Platform, the SOPHiA Whole Exome Solution offers healthcare institutions a standardized genomic solution with exceptional analytical performance. It includes high resolution CNV detection in a single workflow without the need for any reference sample, as well as trio analysis to automatically filter variants based on different inheritance modes.

Welcome to Lara Hashimoto

Meet the latest appointment to join our Executive Team

Lara Hashimoto has joined our Executive Team as Chief Business Officer on April 1st. She will be responsible for Marketing, Product Management and Business Development.

"I believe the future in healthcare will be increasingly individualized with significantly improved outcomes through the application of multi-modality prediction modelling. SOPHiA GENETICS is best positioned to drive this transformation," said Lara Hashimoto, MSc, PhD, MBA.

Dasa chose SOPHiA for personalized medicine

SOPHiA, a strategic partner in Latin America

"SOPHiA GENETICS has now become a strategic partner in our precision medicine initiatives at Dasa. We are very pleased with the initial accomplishments since 2016 together in the building of our brand GeneOne. To better understand the oncology data harnessed at all steps of the patient's diagnostic journey, is of crucial importance to us. That is why today we foresee many new collaborations with SOPHiA in new innovative applications such as radiogenomics," said Gustavo Campana, Medical Director of Clinical Analysis at Dasa.

EMPLOYEE MOTIVATION

Empowering the People Behind Data-Driven Medicine through Human Connections

"Through the difficulties of isolation during the outbreak of COVID-19, we continue to work and create new solutions. We adapt and we do it together day by day. I feel like we're inspired now more than ever to perform the excellent work and assistance that we've used to providing. If anything, I'm excited to see what we can do next."
